TAYLOR SPEAR

Passionate software engineer and system builder with 6+ years of experience transforming legacy platforms and architecting scalable solutions from the ground up. Skilled in designing end-to-end systems that drive performance, efficiency, and business growth.

EXPERIENCE

MoZeus - Experiential and Event Tech | Atlanta, GA

Oct 2025 - Present

- Developed interactive front-end experiences for large-scale live activations, including games, sweepstakes, and prize-based engagements for enterprise clients such as Delta Air Lines, State Farm, and Cricket Wireless centered around data capture.
- Built responsive, real-time user interfaces for experiential marketing campaigns, ensuring seamless performance across high-traffic live events and diverse device environments.
- Technical Support in real time for live activations
- Optimized front-end performance and reliability for live event conditions, reducing latency and ensuring stable user experiences under peak concurrent usage.

Rental Monitoring Solutions | Atlanta, GA

Aug 2024 - Oct 2025

- Built and launched a company website from the ground up using React.js, implementing a modular architecture that improved development speed and maintainability.
- Applied React.js best practices to deliver a scalable, responsive UI with fast load times and consistent performance across modern browsers.
- Designed and implemented cloud-native infrastructure using AWS services (API Gateway, Lambda, S3, CloudWatch, IAM) to support a reliable and cost-efficient system.
- Developed and deployed scalable RESTful APIs using Python and AWS Lambda, enabling efficient data processing and rapid iteration on product features.

Agency Q | Bethesda , MD

Oct 2022 - Apr 2024

- Delivered dynamic, client-facing web applications using React.js and integrated with Sitecore Headless CMS, supporting a range of government and enterprise clients with unique business requirements.
- Refactored legacy MVC frontends into a modular React.js component system, cutting feature delivery time from weeks to days while improving UI responsiveness and state management.
- Designed and deployed containerized microservices using Docker, streamlining development and environment parity across dev/stage/prod.
- Collaborated with cross-functional teams and government stakeholders to meet compliance, accessibility, and security standards for federal contracts (e.g., Section 508, FISMA).

Continue to page 2 for more Experience , Education , Projects

- Developed the front end of a secure internal web application using Angular, enabling network security teams to carry out day-to-day operations on a modernized platform.
- Collaborated with backend developers and cybersecurity personnel to ensure seamless API integration and secure data handling across all modules.
- Deployed and maintained the application within Microsoft Azure, leveraging cloud services for hosting, CI/CD pipelines, and secure authentication.

General Systems Corporation | McLean , VA**July 2022 - Oct 2022
April 2024 - July 2024**

- Developed and maintained modular front-end applications using Vue.js, React, and Angular for various client projects, ensuring consistency and performance across frameworks.
- Supported cloud-native infrastructure initiatives, integrating frontend apps with cloud services and ensuring deployment readiness across dev and staging environments.
- Created reusable component libraries and documentation to streamline development for cross-functional teams.

RECENT FREELANCE/OTHER PROJECTS

The Black 411

- Designed and built a location-based business discovery platform connecting users to minority-owned businesses through SMS and web interfaces.
- Architected a scalable backend using relational database design, search optimization, and tagging systems to enable fast, relevant query results.
- Integrated third-party services (Twilio and Stripe, payment processing) to support real-time communication and business onboarding workflows.
- Developed a monetization system allowing businesses to register, manage listings, and increase visibility through paid subscriptions.

Perkster

- Built a fintech mobile application focused on optimizing credit card rewards through intelligent transaction and location-based recommendations.
- Designed end-to-end system architecture integrating financial APIs, geolocation services, and real-time data processing.
- Implemented a custom rewards optimization engine to surface the best card and offers based on user behavior and context.
- Leveraged modern tools (React Native, Supabase, serverless functions) to deliver a scalable, data-driven user experience.
